Control ID	Process	Risk	Control Objective	Control Description	Frequency	Control Owner	Key Evidence	Planned Test Procedure
UAM-01	User Access Management	Unauthorized users retain access	Ensure only authorized users have appropriate access	Quarterly access reviews are performed by application owners to validate user access remains appropriate.	Quarterly	Application Owner	Access review report, reviewer sign-off	Inspect access review documentation and verify reviews were completed and approved.
UAM-02	User Provisioning	Users receive unauthorized or excessive access	Ensure access is approved before provisioning	User access requests require documented manager approval before access is granted.	Per Request	IT Administrator	Access request ticket, manager approval, provisioning record	Select a sample of new users and verify approvals were obtained before access assignment.
UAM-03	User Deprovisioning	Terminated users retain access	Ensure access is removed promptly after termination	User accounts are disabled within the defined SLA following employee termination.	Daily	IT Administrator	HR termination report, Okta deactivation log	Compare termination dates with account deactivation dates to verify timely removal of access.
UAM-04	Privileged Access Management	Excessive privileges may result in unauthorized activities	Ensure privileged access is restricted and reviewed on a quarterly basis	Privileged user access is reviewed quarterly to validate access remains appropriate.	Quarterly	IAM Team / Application Owner	Privileged access listing, access review report, reviewer approval	Review privileged access reviews and verify administrator access was approved and appropriate.
CHG-01	Change Management	Unauthorized production changes may impact system stability	Ensure production changes are approved, tested, and authorized	Production changes require documented approval and testing before deployment.	Per Change	Change Manager	ServiceNow change ticket, approval record, testing evidence	Review sample changes and verify approval, testing, and deployment evidence.
OPS-01	Backup Operations	Data loss due to failed backups	Ensure backups complete successfully and failures are investigated	Backup jobs are monitored daily and failures are investigated and resolved.	Daily	Infrastructure Operations Team	AWS backup reports, monitoring logs, incident records	Review backup monitoring reports and verify failed backups were addressed.
OPS-02	Batch Job Monitoring	Failed scheduled jobs may impact business operations	Ensure scheduled jobs execute successfully and failures are identified	Batch job execution is monitored and failed jobs are investigated and remediated.	Daily	Infrastructure Operations Team	Job monitoring reports, failure alerts, incident tickets	Review job monitoring records and verify failed jobs were investigated and resolved.
OPS-03	Incident Management	IT incidents may not be identified, tracked, or resolved timely	Ensure incidents are recorded and managed according to defined procedures	IT incidents are logged, assigned, tracked, escalated, and resolved through the incident management process.	Per Incident	IT Operations Team	Incident tickets, escalation records, resolution notes	Sample incidents and verify documentation, ownership, escalation, and closure.
