Test ID	Control ID	Control Description	Test Objective	Procedure	Result	Conclusion
CHG-T001	CHG-01	Production Change Management	Verify production changes were appropriately requested, approved, tested, and implemented according to change management requirements	Review change requests, approval records, testing evidence, and deployment records	Pass	Production change management control operated effectively; all changes tested were appropriately requested, approved, tested, and deployed to production with no exceptions identified.

Test ID	Control ID	Population Description	Population Source	Completeness Check	Population Size	Sample Size	Selection Method	Evidence Reviewed	Exceptions	Result	Conclusion	Testing Notes
CHG-T001	CHG-01	Production changes completed during the audit period	ServiceNow Change Register	Reconcile approved production changes against deployment records to confirm all completed changes are included	12 changes	12 changes	Full population testing	E-011, E-012, E-013, E-014	None identified	Pass	Production change management control operated effectively. All 12 production changes tested were appropriately approved, tested, and implemented in accordance with the organization's change management process. No exceptions were identified.	Full population testing was performed because the population consisted of 12 completed production changes. Each change was traced from the ServiceNow Change Register through approval, testing, and production deployment to verify compliance with the change management process. The population included both Standard and Normal changes to provide coverage across varying risk levels. Application changes were approved by the Engineering Manager, while infrastructure, security, and network changes were approved by the IT Manager, reflecting appropriate ownership. Security-sensitive changes (CHG-2005 and CHG-2010) included documented technical peer review before deployment.

Evidence ID	Evidence Name	Purpose	Source System
E-011	ServiceNow Change Register	Population of production changes selected for testing	ServiceNow
E-012	Change Approval Records	Verify changes received appropriate approval before implementation	ServiceNow
E-013	Change Testing Evidence	Verify testing was completed before production deployment	ServiceNow / Test Documentation
E-014	Production Deployment Log	Verify approved changes were deployed to production	AWS / ServiceNow
