Test ID	Control ID	Control Description	Test Objective	Procedure	Result	Conclusion
OPS-T001	OPS-01	Backup Monitoring	Verify backup jobs were monitored daily and backup failures were identified, investigated, and resolved	Review backup monitoring reports and failure investigation records	Pass	Backup monitoring control operated effectively. All 30 backup jobs reviewed had monitoring evidence available, and the 2 identified failures were appropriately investigated, resolved, and supported by documented remediation evidence.
OPS-T002	OPS-02	Batch Job Monitoring	Verify batch job execution was monitored and failed jobs were investigated and remediated	Review batch job monitoring reports and failure investigation records	Pass	Batch job monitoring control operated effectively. All 30 batch job executions reviewed had monitoring evidence available, and the 2 identified failures were investigated and remediated with documented resolution evidence.
OPS-T003	OPS-03	Incident Management	Verify IT incidents were logged, tracked, escalated, and resolved according to defined procedures	Review incident register and resolution records	Pass	Incident management control operated effectively. All 6 incidents reviewed were appropriately logged, assigned, tracked, and resolved, with closure verification available.

Test ID	Control ID	Population Description	Population Source	Completeness Check	Population Size	Sample Size	Selection Method	Evidence Reviewed	Exceptions	Result	Conclusion	Testing Notes
OPS-T001	OPS-01	Daily backup jobs executed during the audit period	AWS Backup Monitoring Report (E-015)	Reconciled backup monitoring records against failure investigation records to confirm identified failures were investigated and resolved	30 backup jobs	30 backup jobs	Full population testing	E-015, E-018	None identified	Pass	Backup monitoring control operated effectively; all 30 backup jobs reviewed had monitoring evidence available, and the 2 identified failures were appropriately investigated, resolved, and supported by documented remediation evidence	Full population testing was performed because the population consisted of 30 daily backup jobs during March 2026. Each backup execution was traced from the monitoring report (E-015); the 2 identified failures were traced to investigation records (E-018) to confirm root cause and resolution.
OPS-T002	OPS-02	Batch jobs executed during the audit period	Batch Job Monitoring Report (E-016)	Reconciled batch job monitoring records against failure investigation records to confirm identified failures were investigated and remediated	30 batch jobs	30 batch jobs	Full population testing	E-016, E-019	None identified	Pass	Batch job monitoring control operated effectively; all 30 batch job executions reviewed had monitoring evidence available, and the 2 identified failures were investigated and remediated with documented resolution evidence	Full population testing was performed because the population consisted of 30 batch jobs during March 2026. Each batch execution was traced from the monitoring report (E-016); the 2 identified failures were traced to investigation records (E-019) to confirm root cause and remediation.
OPS-T003	OPS-03	IT incidents logged during the audit period	ServiceNow Incident Register (E-017)	Reconciled incident register against resolution records to confirm incidents were tracked, escalated where required, and resolved	6 incidents	6 incidents	Full population testing	E-017, E-020	None identified	Pass	Incident management control operated effectively; all 6 incidents reviewed were appropriately logged, assigned, tracked, and resolved, with closure verification available	Full population testing was performed because the population consisted of 6 incidents during March 2026. Each incident was traced from the register (E-017) to resolution records (E-020) to confirm resolution and closure verification. The population included both control-related incidents (backup/batch failures) and unrelated operational incidents (network, application), reflecting a full incident register scope.

Evidence ID	Evidence Name	Purpose	Source System
E-015	Backup Job Monitoring Report	Verify backup jobs were monitored daily and failures were identified	AWS
E-016	Batch Job Monitoring Report	Verify batch job execution was monitored and failures were identified	AWS
E-017	Incident Register	Verify IT incidents were logged and tracked	ServiceNow
E-018	Backup Failure Investigation Records	Verify identified backup failures were investigated and resolved	AWS
E-019	Batch Job Failure Investigation Records	Verify identified batch job failures were investigated and remediated	AWS
E-020	Incident Resolution Records	Verify incidents were tracked through resolution	ServiceNow
