Test ID	Control ID	Control Description	Test Objective	Procedure	Result	Conclusion
UAM-T001	UAM-01	Quarterly Access Reviews	Verify quarterly access reviews were completed and approved	Review quarterly access review reports and supporting evidence	Pass	Quarterly access review control operated effectively for the Q1 2026 instance tested; all users were certified by an appropriate reviewer with no exceptions identified.
UAM-T002	UAM-02	User Provisioning	Verify user access was approved before provisioning	Review access requests, approvals, and provisioning records	Pass	User provisioning control operated effectively; access was approved before provisioning for all 13 items tested, with no exceptions identified.
UAM-T003	UAM-03	User Deprovisioning	Verify terminated users were removed within the defined SLA	Compare HR termination records with Okta deactivation logs	Pass	Deprovisioning control operated effectively; all terminated users had access removed within the defined SLA, with no exceptions identified
UAM-T004	UAM-04	Privileged Access Reviews	Verify privileged access was reviewed quarterly and approved	Review privileged access review reports and approvals	Pass	Quarterly privileged access review was completed for Q1 2026 all identified administrative accounts, and access was supported by documented business justification

Test ID	Control ID	Population Description	Population Source	Completeness Check	Population Size	Sample Size	Selection Method	Evidence Reviewed	Exceptions	Result	Conclusion	Testing notes	Audit Observation
UAM-T001	UAM-01	Q1 2026 quarterly access review, tested as a representative instance of the quarterly review control	Okta user export and Q1 2026 access review records	Reconciled Okta active user export (E-001) against Q1 2026 access review population (E-002) to confirm all users were included	1 review	1 review	Full population testing	E-001, E-002, E-003	None identified	Pass	Quarterly access review control operated effectively for the tested instance (Q1 2026). All users in the population were certified by an appropriate reviewer, with no exceptions identified.	Only 1 quarterly review (Q1 2026) was performed and evidenced during the testing period. Within that review, all 20 users in the population (E-001) were covered — full population testing was applied at the user level as well. Full-year testing (Q2–Q4) was not performed for this portfolio demonstration.	
UAM-T002	UAM-02	All new user access requests submitted during the audit period	ServiceNow access request tickets and Okta provisioning logs	Reconciled access request tickets (E-004) against Okta provisioning log (E-006) to confirm all requests were accounted for	13 requests	13 requests	Full population testing	E-004, E-005, E-006	None identified	Pass	User provisioning control operated effectively. Access was provisioned only after documented manager approval, and provisioned roles matched approved requests for all tested items.	Includes multiple request types (New Hire, Role Change, Additional Access) to reflect varying risk levels. Routine new-hire provisioning was automated via Okta Workflow; non-standard requests (role changes, privileged access) were provisioned manually by a named administrator.	
UAM-T003	UAM-03	All employee terminations during the audit period	HR termination report and Okta deactivation log	Reconciled HR termination report (E-007) against Okta deactivation log (E-008) to confirm all terminated employees were accounted for	12 terminations	12 terminations	Full population testing	E-007, E-008	None identified	Pass	Deprovisioning control operated effectively; all tested terminated users access was disabled within the defined 1 business day SLA, with no exceptions identified	Involuntary terminations were deactivated same-day by a named administrator, reflecting a risk-based prioritization; voluntary terminations were deactivated the next business day via automated Okta Workflow	
UAM-T004	UAM-04	Q1 2026 privileged access review, tested as a representative instance of the quarterly privileged access review control	Okta privileged account listing and Q1 2026 privileged access review report	Reconciled Okta active user export (E-001) against the privileged account listing (E-009) to verify privileged users were completely identified. Reviewed Q1 2026 privileged access review documentation (E-010) to confirm all identified privileged accounts were reviewed.	1 review	1 review	Full population testing	E-001, E-009, E-010	None identified	Pass	Privileged access reviews were completed for all identified administrative accounts, and access was supported by documented business justification.	Q1 2026 privileged access review tested (1 of 4 quarterly reviews). All 4 privileged accounts identified in E-009 were reviewed against E-010. Full population testing was performed at the account level.	A segregation-of-duties design observation was identified. Privileged access is reviewed by the IT Manager, while certain privileged access provisioning activities are performed by IAM administrators within the same function. Although all reviewed access was appropriate, independent secondary review by Security or Compliance would strengthen the control design.

Evidence ID	Evidence Name	Source System	Related Control ID	Purpose
E-001	Okta User Access Export	Okta	UAM-01, UAM-04	Validate user population and identify active and privileged users
E-002	Quarterly Access Review Report	Okta	UAM-01	Verify completion of periodic access reviews
E-003	Access Review Sign-off Record	Okta	UAM-01	Confirm reviewer approval and completion
E-004	Access Request Ticket	ServiceNow	UAM-02	Verify access requests were submitted and approved
E-005	Manager Approval Record	ServiceNow	UAM-02	Confirm appropriate approval before access provisioning
E-006	User Provisioning Log	Okta	UAM-02	Verify access assignment matches approved requests
E-007	Employee Termination Report	HR System	UAM-03	Identify terminated users requiring access removal
E-008	Okta Deactivation Log	Okta	UAM-03	Verify timely removal of terminated user access
E-009	Privileged User Access List	Okta	UAM-04	Identify users with elevated privileges
E-010	Privileged Access Review Report	Okta	UAM-04	Verify privileged access reviews were completed
